

Most webmasters will either build a site that only they can edit, or they suggest you use a program like DreamWeaver.

If your webmaster built your website without giving you tools, like our [WebPublisher](#) tool, you have to keep hiring them to make even the smallest of changes.

DreamWeaver is designed to create websites, and it does a good job if you want a website for your hobby. DreamWeaver, and similar programs, write code that is inefficient, sloppy, and will often **prevent you from getting results**.
